

Method and system for displaying comic books and graphic novels on all sizes of electronic display screens.

Abstract

A method and system for displaying comic books, and graphic novels on all sizes of electronic display screens. This method maximizes visual quality and text legibility by: displaying one panel, e.g., image at a time, and by generating and sizing the text balloons based on the text of the balloon and a font type and size selected from a group of font types and sizes that are legible for the size of the display area on which the panel and balloons are drawn.
